

Today we want to show the use of a Safety Net Type U + plastic membrane.

The Safety Net Type U is a certified safety net system (EN-1263-1 U A2 M100 Q.). The common use of this system is fall protection on sloping roofs, roofs or perimeter protection such as railing or perimeter enclosure of the building.

In this case, the Safety Sistem U has been placed next to a plastic membrane as a curtain to prevent dust from passing from one side of the working area to the other.

As can be seen in the result, the work area has been completely isolated and clean, which makes this Safety Net + plastic membrane a fully compatible system that achieves the desired result.

At [VisorNets](#) we adapt to the needs of each client and each project. [Contact with us.](#)
