Stairs are potentially dangerous spaces if we talk about falls from different heights. Especially if these stairs are located in areas where the presence of children is usually common, as is the case in educational centers, for example.

Safety nets are positioned as an excellent barrier to prevent accidents caused by falls at different levels.

Safety nets for stairs: Why choose them?

Safety nets, in addition to being an exceptional method to prevent falls, also have other characteristics that make them a very good security measure.

Let in air and light

Adapts to the aesthetics of the area

Does not cause a feeling of confinement or tunnel effect

Be-spoke manufacturing to adapt it to the area

Possibility of choosing color and rope diameter

Remember that at any time you can contact the Visornets technical team that will advise you to find the best option for your case.
