

## Visor Fall Arrest Nets installs safety netting with debris mesh at rugby stadium in Ireland

At Visor Fall Arrest Nets, we are proud to announce the recent installation of a safety net with debris mesh in a major football stadium in Ireland. This international project is a new milestone for our team. It also strengthens our presence in the fall protection sector across Europe.

## Comprehensive Protection with Debris Mesh

The installed system includes a Type S safety net, fully compliant with EN 1263-1 standards. We added a debris mesh to offer full protection. This setup helps prevent falls from height, and also stops tools or debris from falling. As a result, it keeps both workers and the public safe.

This type of net is ideal for sports facilities. These venues require a high level of safety during renovation or maintenance work.

Tailored Project in Ireland

Each project we take on is unique. For this stadium, we designed a custom solution. We're happy to say the result was a success. The safety net is now in place and adds an extra layer of protection for a high-traffic venue.

At Visor Fall Arrest Nets, we have spent years developing reliable collective protection systems. We aim to meet the highest standards of quality and safety. This new project in Ireland joins others we've completed in Spain, France, Germany, and the United Kingdom.

# We manufacture our safety nets

in our own facilities in Spain. This allows us to control the entire process, from design to final installation.

We Continue to Grow

This Irish stadium marks the start of a new phase in our international expansion. We remain committed to innovation, safety, and precision. Our goal is to deliver strong, certified safety nets wherever they are needed.
