

Safety nets is a passive system for fall protection, it means they protect a worker during Works at heights even he is not attached to a lifeline.

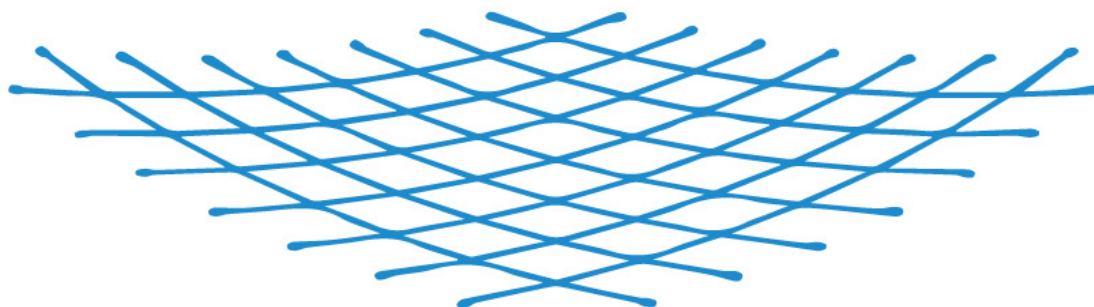

The purpose of the safety nets is to avoid or minimize the effect of a fall from heights.

What are safety nets?

Worker with lifeline and without safety net

Worker with lifeline and with safety net

In comparison to individual protective system, the worker is always safe, while using other individual systems such as lifelines, temporary or definitive, the worker is safe just when he is attached.

In Visornets as safety netting manufacturer Company we are specialized in the production of safety nets and collective system devices. Please discover us.
